Trends Endocrinol. Metab. 12:118 122(2001).
-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type 1 (GHSR) inducing the release of growth hormone from the ptulitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation.

```
hormone secretagogue receptor.";
Trends Endocrinol. Metab. 12:118-122(2001).
-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type 1 (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation.

Isoid-0907H7-1; Sequence-VSP_003248;
Isoid-0907H7-2; Sequence-VSP_003248;
TISSUE SPECIFICITY: Broadly expressed with higher expression in the stomach. Very low levels are detected in the hypothalamus, heart, lung, pancreas, intestine and adipose tissue.
PTM: O-n-octanoylation is essential for activity. The replacement of Ser-26 by aromatic tryptophan preserves ghrelin activity.
MASS_SPECTROMETRY: MW-3314.9; MW_ERR-0.7; METHOD-Electrospray;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

FISOLS—09EQXO-2; Sequence=VSP_0003346;
FISOUS SPECIFICITY: Mainly expressed in the gastrointestinal tract with higher levels in the stomach, medium levels in the duodenum, jetunum, ileum and colon. Low expression in the testis and brain. Not detected in the salivary gland, pancreas, liver and lung. PTM: O-n-octanoylation is essential for activity (By similarity).
SIMILARITY: BELONGS TO THE MOTILIN FAMILY.
                                                                                                                                                                                                                                               SEQUENCE FROM N.A. (ISOFORM 1).

-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type I (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).

-!- SUBCELULIAR LOCATION: Secreted (By similarity).

-!- PTM: O-n-octanoylation is essential for activity (By similarity).

-!- SIMILARITY: BELONGS TO THE MOTILIN FAMILY.

-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type I (GHSR) inducing the release of growth hormone the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Canīs familiaris (Dog).

secretase requiretes transcription..;

1. Biol. Chem. 277:44195-44201(2002).

1. FUNCTION: May play a role in postsynaptic function. The C-terminal gamma-secretase processed fragment, ALIDI, activates transcription activation through APBB1 (Fe65) binding. Couples to JIP signal transduction through APBB1 (Fe65) binding. May interact with cellular G-protein signaling pathways. Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I.

1. FUNCTION: The gamma-CTF peptide, C30, is a potent enhancer of neuronal apoptosis (By similarity).

2. Isubunt: Binds, via its C-terminal, to the PID domain of several cytoplasmic proteins, including APBB and APBA family members, MAPKBIPI and aDB1 (By similarity). Binding to Dabi inhibits its

- FORWITON: CTILICAL COMPONENT Of the Visual transduction cascade, controlling the calcium concentration of outer segments during light and darkness. Light causes a rapid lowering of cytosolic free calcium in the outer segment of both retinal rod and come photoreceptors and the light-induced lowering of calcium is caused by extrusion via this protein which plays a key role in the process of light adaptation. Transports one Ca(2+) and one K(+) in exchange for four Na(+) (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

The complete genome of hyperthermophile Methanopyrus kandleri Av19
an anonophyty of archeal methanopens.,
The Proc. Natl. Acad. Sci. U.S.A. 99:4644-4649(2002).

-I- FUNCTION: Is required not only for elongation of protein synthesis
but also for the initiation of all mRNA translation through
initiator ERNA(fMet) aminoeylation (By similarity).

-I- CATALYTIC ACTIVITY: ATP + E-methionine + ERNA(Met) - AMP +
Giphosphate + L-methionyl-ERNA(Met).

-I- SUBBNIT: Homodimer (By similarity).

-I- SUBENIT: Homodimer (By similarity).

-I- SUBENIT: Belongs to class-I aminoacyl-tRNA synthetase family.

-I- SIMILARITY: Contains I tRNA-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. **Controlling the calcium concentration of outer segments during light and darkness. Light causes a rapid lowering of cytosolic free calcium in the outer segment of both retinal rod and cone photoreceptors and the light-induced lowering of calcium is caused by extrusion via this protein which plays a key role in the process of light adaptation. Transports one Ca(2+) and one K(+) in exchange for four Na(+) (By similarity).

**Controlling the Control in the outer segment in the process of light adaptation. Transports one Ca(2+) and one K(+) in exchange for four Na(+) (By similarity).

LINE RELEASE OF THE SPLICING OF PRE-MRNA AND MEDIATE
THE RELEASE OF THE SPLICED MRNA FROM SPLICEOSOMES (BY SIMILARITY).
SUBCELLULAR LOCATION: Nuclear (Probable).
SUBCELLULAR LOCATION: Nuclear (Probable).
SUBFAMILY: DDX8/PRP22 OF THE DEAD BOX HELICASE FAMILY. DEAH
SUBFAMILY: DDX8/PRP22 OFTHOLOG.
SUBFAMILY: Contains 1 s1 motif domain.
CAUTION: Ref.1 sequences differ from that shown due to a frameshift in position 57.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sus scrofa (P1g).

Sequence 18, Application US/09395115

Patent No. 6271365

GENERAL INFORMATION:
APPLICANT: Miyazono, Kohel; Dijke, Peter Ten;
APPLICANT: Miyazono, Kohel; Dijke, Peter Ten;
APPLICANT: Franzen, Petrari Yamashita, Hiddetoshi; Heldin, Carl-Henrik TITLE OF INVENTION: Activin Receptor-Like Kinase Proteins
TITLE OF INVENTION: Having Serine Threonine Kinase Domains And Their Use NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSEE: Felfe Lynch
STREET: 805 Third Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 502;

Patent No. 6331621

GENERAL INFORMATION:

APPLICANT: Miyazono, Kohei; Dijke, Peter Ten;

APPLICANT: Franzen, Petra; Yamashita, Hidetoshi; Heldin, Carl-Henrik

TITLE OF INVENTION: Activin Receptor-Like Kinase, Proteins

TITLE OF ENGENCES: 29

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 502;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a protein designated Zsig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or alielit variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal cell contractility, secretion of digestive arymes/acids, gastrointestinal inflammation, reflux disease and nutrient enzymes, gastrointestinal inflammation, reflux disease and nutrient reputation. Zsig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety or treat obesity and other metabolic disorders where neurological feedback modulates nutritional absorption. They are useful to identify zsig33 agonists, antagonists and ligands and to produce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

characteries and peptide-contenting process. Associated with leptes have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can can eused in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation of HSPP are acceptive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, crohn's disease, microbial or other infections, congestive or ischaemic heart disease, microbial or other infections, congestive or diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP concleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring). In gene therapy, as antisense, cripozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to matgonists (potential therapeutic agents). Ab are used to diagnose, or monitor, HSPP-related diseases (in usual immunoassays), as therapeutic cantagonists, in competitive drug screens, and for purification of HSPP con natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHQRVQQRKESKKPPAKLQPRALAGWLRPE 60

                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, mamunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous Injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous alocalised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral socierosis, and ShyDrager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ssays for receptor activity, arthritis and inflammation, leukaemias and N.S. disorders.

The invention relates to a method of forming a reversible peptide-
receptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsig33 peptide (Comprisibility and acalay)
of AAB62649), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
cansiderion in a cell expressing a receptor. It is also useful for
modulating secretion of hormones, neural development and/or utilization,
gastric contractility, nutrient uptake, secretion of digestive and
parcreatic enzymes and hormones, secretion of insulin-like growth factor
c. secretion of non-zsig33 proteins. It is useful for modulating growth
common secretion in a mammal having a disease associated with abnormal
evels of growth hormone, such as osteoporosis, bone repair, bone
remodeling, low osteoblast levels, cartilage repair and remodeling,
skeletal dysplasia, immune suppression, obesity, growth retardation,
skeletal dysplasia, immune suppression, obesity, growth retardation,
catabolic responses after surgery, cachexia, protein loss,
dwarfism, wound healing and ovulation induction, treating a mammal having
a metabolic disorder requiring neurological feedback, such as satilety
capulation, glucose absorption and metabolism and neuropathy-associated
gastrointestinal disorders, and stimulating glucose-induced insulin
celease in a mammal. The present sequence represents the human zsig33
polypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHORVQORKESKKPPAKLQPRALAGWLRPE 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see secretagogue receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jedunum tissue. Amodulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying.
                                                                                                                  SGIP; zsig33; anorectic; antidiabetic; somatotropin; somatomedin-C; nutritional absorption modulator; growth hormone secretagogue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel variants of SGIP peptides for modulating contractility in duodenum or jejunum tissue, pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion or modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 117;

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a local compasses the unmodified peptides; the DNA encoding the peptides comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the peptides comprising are useful for treating and/or diagnosing diseases of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with an accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHORVQQRKESKKPPAKLQPRALAGWLRPE 60

2SIG33-Like peptides and polynucleotides, useful for modulating gastric
contractility, nutrient uptake, growth hormones and/or secretion of
digestive/pancreatic enzymes and hormones -
                                                                                                                  Human, zsig33-like peptide, gastric contractility, nutrient uptake,
growth hormone; digestive enzyme; restorative therapy; gene therapy,
protein therapy; gastrointestinal; endocrine; anabolic.
                                                                                                                                                                                                                                                                                      10-MAY-2001; 2001US-0853253.
                                                                                                                                                                                                                                                                                                                       11-MAY-2000; 2000US-203300P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents human zsig33. The specification describes a short gastrointestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with the inappropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by expressing inactive proteins or to supplement the patients own production of SGIP SGIP may also be used as an antigen in the production of antibodies against SGIP and in assays to identify modulators of SGIP expression and activity. The anti-SGIP antibodies, agonists and antigonists may also be used to regulate expression and activity. The anti-SGIP antibodies may also be used dariance of SGIP in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó

Uncleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate 2SIG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar, nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The 2SIG33 and in assays to identify modulators of SIG33 expression and activity. The anti-2SIG33 antibodies and antagonists are used to down regulate expression and activity. The anti-2SIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 in samples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide is used in protein therapy. The present sequence is human zsig33 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 DGGQAEGAEDELEVRFNAPFDVGIKLSGVQYQQHSQALGKFLQDILWEEAKEAPADK 117

                                                                                                                                                                         ç
                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                The invention relates to zsig13-11ke peptides (ZS31LP) including 2 zsig33-1inker, zsig13-beta, zsig33-gamma, zsig33-delta and zsig33-linker, zsig133-beta, zsig33-gamma, zsig33-delta and zsig33-linker, zsig133-beta, zsig33-gamma, zsig33-delta and zsig33-linke peptides. ZS31LP peptides activate the immune system to zsig33-like peptides. ZS31LP peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodaficiancy virus, patients, in maproving vaccines and in treatment of bacterial, viral, patients, in improving vaccines and in treatment of bacterial, viral, patients, in consider receptors involved in growth regulation in the liver. Blood consolated formation of the invention are used to identify and solated in growth requiration in the liver. Blood consolated in growth requiration of tumour cells, as additives to anti-consolated for differential of tumour cells, as additives to anti-consolated differential in growth factor and contrain the pastrointestinal system, brain and central nervous system. These concentrations are useful for treating dysfunction associated with contractile contractility in vivo and to treat contractility in the pancreas and/or brain, contractility, recrutiment of digestive enzymes, inflammation of normal and acids, secretion of hormones in the pancreas and/or brain, contractility in gene therapy. The present sequence is human zsig33 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises ssig33-like peptides

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteels. The PRO polypeptides are useful for detecting other PRO polypeptides, for inking bloactive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists.

The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating tresence of tumours. The polynucleotide sequences encoding the presence of tumours. The polynucleotide sequences encoding the presence of tumours. The polynucleotide sequences encoding pRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ABU66570-ABU66844 represent the human Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence cata for this patent was obtained in electronic sequence are sequenced by the invention.

 The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in coll paractive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardlac insufficiency disorders. PRO156, and PRO186 critical capillary endothelial growth, and PRO136, PRO943, PRO828, PRO826, PRO8186, PRO943, PRO828, PRO826, PRO8186, PRO943, PRO828, PRO826, PRO1387 induce c-fos in endothelial growth, and are thus useful for treating cancerous tumours. PRO812 inhibits vascular conductedial growth factor (VEGF) stimulated proliferation of endothelial growth factor (VEGF) stimulated proliferation of endothelial growth factor (VEGF) stimulated proliferation of colls and is thus useful for inhibiting endothelial cell growth in cells and is thus useful for inhibiting tumour growth. PRO826, PRO1068, PRO1184, PRO1346 and PRO1375 stimulated proliferation of cells and is thus useful for inhibiting tumour growth. PRO826, PRO1068, PRO1184, PRO1314 and PRO1312 inhibiting tumour growth in cells in inhibiting tumour growth in the process survival proliferation of and PRO1312 is also enhances survival of cells induce proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with dermaticial, herpetiformis or coher computations associated with dermaticial, herpetiformis or crohm's cells and pro1312, PRO1322 and PRO1387 induce the proliferation and/or readifferentiation of chondrocytes in culture and cell function such as berger disease or other cells and the such in far such in the such in the useful for treating of chondrocytes in culture and cell such as provers in culture and server the and the such in the such 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHQRVQQRKESKKPPAKLQPRALAGWLRPE 60

                                                                                                                                                                                                                                                                                                                                                                              a
                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in inking a bloadrive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus compared in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus stimulate adrenal cortical capillary endothelial growth, and PRO136, PRO943, PRO943, PRO926, PRO943, PRO926, PRO943, PRO926, PRO1367 induce c-fos in endothelial growth, and PRO136, useful for treating cancerous tumours. PRO912 inhibits vascular cuseful for treating cancerous tumours. PRO912 inhibits vascular condothelial growth factor (VEGE) stimulated proliferation of endothelial cells and is thus useful for inhibiting endothelial cell growth in commands which would be beneficial in inhibiting tumour growth. PRO926, PRO1066, PRO1968, PRO1968, PRO1969, PRO1066, PRO1969, PRO1066, P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       stimulated T-1ymphocytes and are therapeutically useful for enhancing immune response. PROB26, PRO1068 or PRO1132 enhance survival of retinal neurons cells (PRO1132 is also enhances survival/proliferation of rod photoreceptor cells) and therefore are useful for treating retinal disorders of injuries, e.g. retinitis pigmentosum, AMD. PROB19, PROB13 and PRO11066 induce proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Godowski PJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Paoni NF;

                                                                                                                                                                                                                                                                                                                                                                                                             decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the proliferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This is the amino acid sequence of a novel human PRO protein.
